# What is E2ESA?

E2E Service Activator is a complete application based technology solution for business process management. It allows organizations to orchestrate fulfillment orders: modeling, automation, monitoring and optimization of operational processes service activation management.

## Benefits

- Lower costs
- Faster service activation cycle
- Increasing efficiency
- A clear overview of the process

## Design process

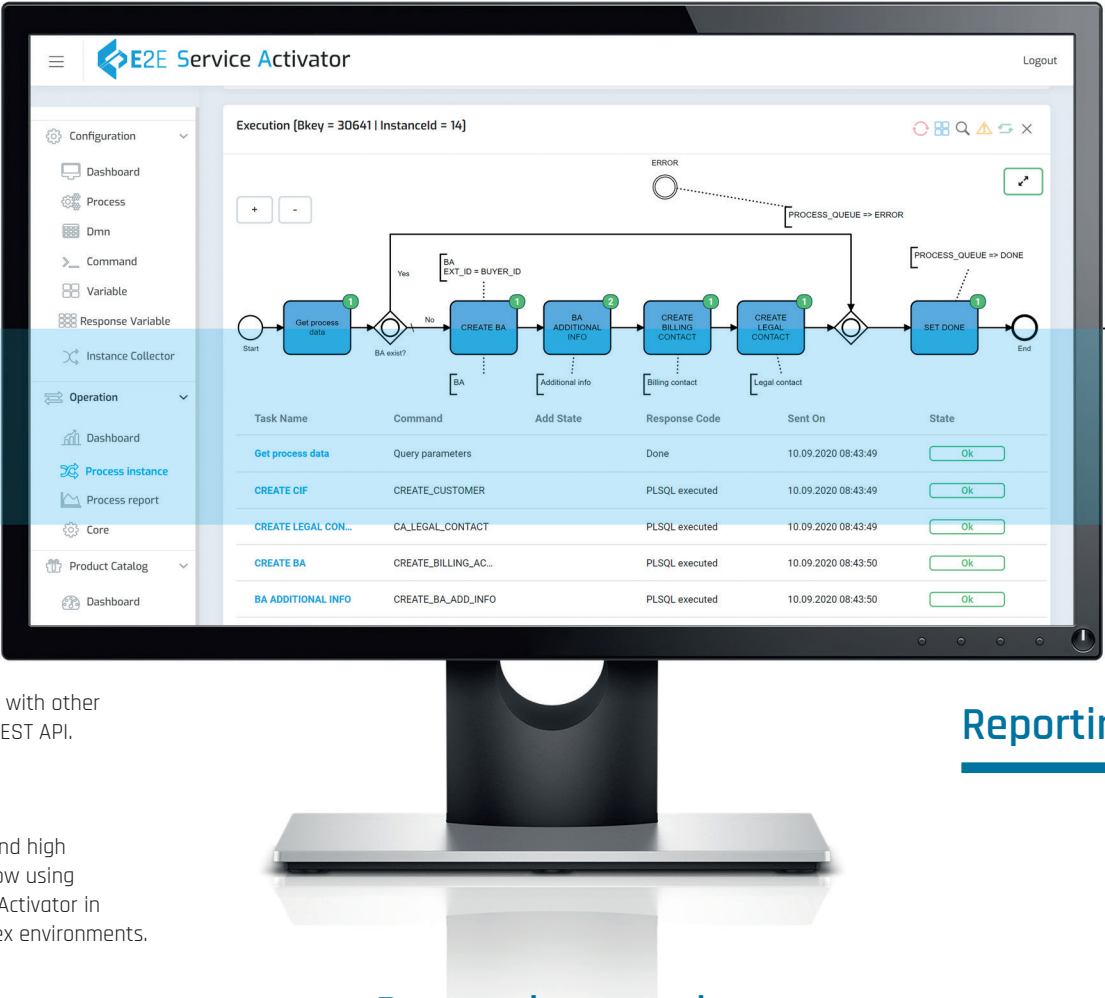

Intuitive business process modeling using simple graphical interface. The interface supports all standard BPM elements and allows accurately modeling of complex processes.

Gain clear insight and easily improve your business processes of your organization!

Minimize the need for coding and configure process activities using templating methodology.

## Technology

- Integration**  
Easy integration with other systems using REST API.
- Performance**  
High reliability and high performance allow using the E2E Service Activator in distinctly complex environments.
- Platform independence**  
The E2E Service Activator is developed in open source technology and completely independent on all platforms.
- User Interface**  
Developed in web technologies and available for use in Internet browser.

## Process instance browser

At all times check status of your single instance of your business process. Optimize process models and remove unnecessary steps by analyzing the statistics collected.

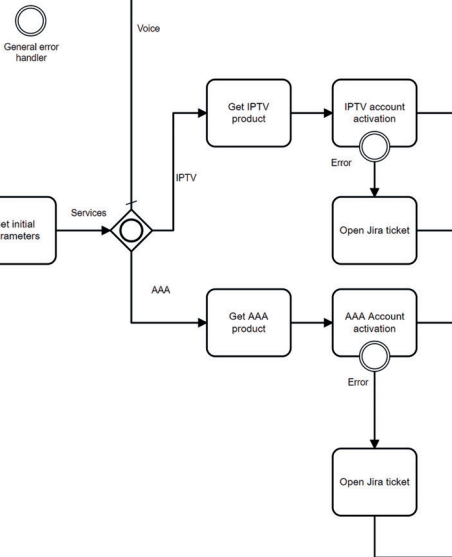

The process instance browser allows detail insight into the current status of each individual instance process, review of current performance of activities, review possibility of eliminating errors (when performing the process) and insight into history performing individual instances of the process.

## Reporting

- State of active and inactive processes
- A detailed activity overview of each individual instance of the process
- System load overview
- Timely receipt of notifications

## Product catalog

- Precisely model each single product using descriptive parameters
- Define mutually inclusive and exclusive product dependencies
- Group identical configurations

END2END d.o.o. is a company engaged in design and development of information systems. We have many years of experience in project management, development and implementation of highly available IT systems. We are authorized Atlassian Gold Solutions Partner and offer business process optimization services, education, technical support and implementation of solutions based on Atlassian products.
